

A GUIDE FOR PREPARING MANUSCRIPT

Revised on December 25, 2023

Journal policy

PALEONTOLOGICAL RESEARCH is an open access journal, dedicated to serving the international community through the dissemination of knowledge in all areas of paleontological research. The Journal publishes original research articles dealing with paleontological research activities. Three types of articles are published in the Journal: Research Articles, Reviews, and Short Notes. *Research Articles* are new original articles, normally not exceeding 24 pages. *Review Articles* are those papers that summarize the current state of knowledge in specific fields or topics of paleontology. They analyze and discuss previously published research results, rather than report new results. *Short Notes*, not exceeding four pages, are intended mainly for new findings, data presentation and taxonomic emendation to benefit the paleontological community. Short papers dealing with new ideas and/or new experimental methods are also accepted as *Short Notes*. No abstract is needed for *Short Notes*. Manuscripts submitted are subject to review and editing by reviewers and a language editor. We welcome submission of manuscripts from nonmembers of the Society.

Paleontological Research is intended to be read by an international audience; therefore it is particularly critical that language be clear and concise. Manuscripts should be written in English. Either British or American usage is acceptable. The editors strongly recommend that author(s) whose mother tongue is not English have their manuscripts critically reviewed for language and style by a native speaker of English before submission.

1. Submission procedure

Papers intended for publication in Paleontological Research should be submitted through the Paleontological Research web-based manuscript submission and handling system, which can be accessed at the following web site where all procedural details are available: <http://mc.manuscriptcentral.com/pr>. Please prepare the following documents before clicking on the submission button: Cover sheet; Main document (Word format); Figures and tables. You may also include a document with Supplementary Online Material

2. Cover sheet

Cover sheet should contain 1) title, 2) full names and affiliations and their addresses of all authors (or residential address, if an author is unaffiliated), 3) postal and e-mail addresses and phone and fax numbers of the author who takes responsibility for the galley proofs, and 4) running title composed of no more than 40 characters. Spell out the authors' first names. In the cover sheet, it must be stated that the content of the manuscript has not been published or submitted for publication elsewhere (except as electronic theses and dissertations available in institutional repositories).

3. Organisation of the manuscript

General information

The manuscript should be typed always in double space. The number of lines per page should be 24-25, and each line should not be right-aligned. Use Times New Roman fonts. Use SI (Système International d'Unités) units. A space should be left between the numerical value and unit symbol, even when the value is used in an adjectival sense, except in the case of superscript units for plane angles. For more information on the use of SI units, visit the relevant page (<http://physics.nist.gov/cuu/Units/checklist.html>) of the National Institute of Standards and Technology (NIST), USA. Geographical and GPS coordinates should be expressed in the form X°Y'Z"N/S, X°Y'Z"E/W. References to units of the geologic time scale should follow the latest version of the International Chronostratigraphic Chart presented by the International Commission on Stratigraphy.

Registration in ZooBank (<http://zoobank.org/>) of all nomenclatural acts on zoology published in Paleontological Research is mandatory prior to online publication. The authors must register new taxa and any nomenclatural acts in due time and provide LSID in Systematic palaeontology section.

Organisation of the manuscript

The main document should contain title, abstract, keywords, main text, references, author contributions (when needed), figure and table captions and appendixes in that order.

Title. A title is to be brief and simple and should summarize the major scientific results of the paper.

Abstract. An abstract should be a condensation and concentration of the essential qualities of the paper. All the papers, excluding *Short Notes*, are to be accompanied by an abstract not exceeding 500 words. New taxonomic or stratigraphic names should be mentioned in the abstract. Do not use citations in the abstract.

Keywords. Select keywords (not more than six words or phrases) which identify the most important subjects covered by the paper and arrange them in alphabetical order.

Main text. Authors should use three or fewer levels of heading to divide the sections of their manuscript. The style of those headings should be based on the latest published papers. For guidance, refer to a recent number of the Journal. No footnotes are to be used. Bibliographical references are to be identified by citing the authors' names, followed in parentheses by the date of publication, with a page number if desired. All citations must have a corresponding entry in the reference list. References to papers that are not published should be given as 'in press' if accepted for publication, or as 'personal communication' in all other cases. Acknowledgements should be placed at the end of the text, before References. Do not use honorifics such as Dr., Prof., Mrs., etc. Stratigraphic nomenclature must follow the International Stratigraphic Guide. Always italicize genus, subgenus, species, subspecies, variety, and forma names. Words and abbreviations of Latin origin (*et al.*, *ca.*) should be italicized; customary exceptions are i.e. and e.g. (after the latter no comma is placed). Do not use small capitals in the surname of a person's name. Use italic type for all variables. Set in Roman type: sin, cos, tan, and all similar trigonometric and hyperbolic functions: log for logarithms; quantifiers such as min, max, opt, etc. Diacritical marks should not be used for Japanese geographic names unless the editors find them necessary to avoid confusion.

Format of systematic palaeontology. The typical format for arrangement of systematic paleontology can be learned from current issues of the journal. All descriptions of new taxa must include a diagnosis, and, as appropriate, stratigraphic and geographic indications, designation of a type or types, depository information, and specification of illustrations. In synonymies use an abbreviated form of the reference, consisting only of author(s) of reference, date of publication, and numbers of pages, plates, figures and text-figures referring to the organism or organisms in question.

A new genus or species should be indicated by using "gen. nov." or "sp. nov.", respectively (e.g. *Newhousia* gen. nov. and *Hydrolithon braganum* sp. nov.). Other expressions such as "n. gen." and "n. sp." cannot be accepted in our journal. Use qualifiers "aff." or "cf." as in these examples: *Gaudryceras* cf. *izumiense* and *Pachydiscus* aff. *flexuosus*. Other expressions such as *Gaudryceras* cf. *G. izumiense* and *Pachydiscus* aff. *P. flexuosus* are not acceptable. In the case that a question mark is used to express uncertainty of the identification to generic or species level, it should be placed unitalicized and without a space after the generic or species name: *Globorotalia?* *Truncatulinoidea* and *Neogloboquadrina pachyderma?*

Vermeijia japonica sp. nov.

Figure 2.1, 2.2

Ariadnaria insignis (Middendorff). Ogasawara et al., 1986, pl. 37, fig. 3a, b.

Etymology.—The present new species is named for the country of Japan.

Type specimens.—Holotype, UMUT CM 32795; para-type, UMUT CM 32796.

Type Locality.—River bank at 1.3 km upstream along the Koide River, Shibata City, Niigata Prefecture (Loc. 3 in Figure 1 = Loc. 2 of Amano et al., 2000a); Kuwae Formation.

Family Nassariidae Iredale, 1916
Subfamily Cylleninae Bellardi, 1882
Genus *Cyllene* Gray in Griffith and Pidgeon, 1834

Type species.—*Cyllene owenii* Gray in Griffith and Pidgeon, 1834.

A systematic work in a larger work should be cited correctly as the following example:

O. keokuk Gurley, 1884, and *O. missourensis* (Shumard, 1858 in Shumard and Swallow, 1858) also exhibit a dorsal apex in the posterior half of the valve.

Capital initial letters are used for expression of geologic time (Early, Middle or Late) and rock units (Lower, Middle, Upper) only where formally erected as divisions; use lower case elsewhere. More information on stratigraphical terms and usage can be found on the website of International Commission on Stratigraphy. The new definition of strata follows the International Stratigraphy Guide.

References. Entries are to be listed alphabetically regardless of the number of authors. If an article has more than seven authors, list the names of the first six authors followed by “*et al.*” No abbreviations will be used in article and book titles. Journal titles are written out, not abbreviated. Series, volume, and part indicating a position in a chronological sequence are to be given, with the appropriate word abbreviated in each case (“ser.,” “vol.,” etc.; see the examples). “The” placed at the beginning of a journal name should be deleted: not “The Island Arc” but “Island Arc”; an exception is made for “The Quaternary Research” published by the Japan Association for Quaternary Research.

Optional clarifications should be put in parentheses: Transactions of the Geological Society (London) [1811 to 1822; thereafter the title became Transactions of the Geological Society of London]; Philosophical Transactions of the Royal Society (London) prior to 1800, when “of London” was added. To this day, the Linnaean Society does not identify itself as “of London” in its various journals; to add that would be a mistake. Places of publication that might be unrecognizable or unfamiliar (e.g. Latinate place names) can be explained.

For author names, the family name is written first separated by a comma from the given names; in case two or more authors share the same family name and initials, spell out the given names. Some cultures allow the practice of a single given name only, and in those cases the single names suffice and are cited according to the individual’s preference. If there are multiple transliteration systems for the language not using the Latin alphabet, an alternative spelling can be given in parentheses, e.g. Huzimoto (Fujimoto).

Electronic material

- Japan Oceanographic Data Center, 2011: *J-DOSS, Oceanographic Data and Information Download Service (Temperature, Current, Depth, Biology, Marine Information)* [online]. [Cited 24 August 2011]. Available from: http://www.jodc.go.jp/index_j.html.

Author contributions. The contributions of each coauthor should follow the References in the following style: M.Y. initiated the study and was primarily responsible for the taxonomic aspects. H.Y. carried out the geochemical analysis and its interpretation. T.K. performed the statistical analysis of the data. All authors contributed to the writing of the paper.

Figure captions. Figure captions are to be typed separately. The captions should be written in either one of the following two styles. If the caption consists of items, follow the first style. If the caption includes sentence(s), follow the second one. Figure 2. Photographs of specimen RM30907 (UMUT RM30907) and CM30908 (UMUT CM30908). **A**, outer surface of right and left valves (RM30907); **B**, inner surface of right and left valves (RM30907); **C**, inner surface of right valve (CM30908). Arrows show the sections for the acetate peels. Figure 3. Schematic illustrations of thecideoid (A) and productide (B, C, D, E) lophophores. **A**, ontogenetic change in the thecideoid lophophore. Ventral (upper) and anteroventral (lower) views of the internal dorsal area are shown for each morphological type of lophophore. Arrows on the lophophore ridges indicate the postulated direction of the transportation of food particles to the mouth. **B**, (The rest is omitted).

4. Tables and figures

Figures. All illustrations, including maps, geologic sections, and halftone illustrations (including “plates”) are to be called figures and must be numbered in the same sequence as they are first cited in the text. Citations of illustrations in the text are to be spelled out in full (e.g. Figure 2 or Figure 2.1). Plan the illustrations so that they take up either the entire width of the printed page (170 mm) or the width of one column (80 mm). An illustration and its caption must be included in the same printed page. Originals should not be smaller than the final intended size for printing. No foldouts will be accepted. Photographs of all specimens except sections must be illuminated from the upper left side, as is conventional. The size of material should be indicated by a scale bar or described in a figure caption (length = 3.5 cm). Indication by magnification (x 3.5) is not allowed. Massive raw data should be included in an Appendix, which will be placed at the end of a paper.

Electronic formats. For tables, Excel (Microsoft) files are preferable (save each table in a separate file). For illustrations, TIFF, EPS, PSD (Adobe Photoshop), or AI (Adobe Illustrator) files are preferred. When preparing color figures, the color mode should be set to RGB, not CMYK. Resolution of all the figures is 300 dpi or less at the time of online submission. The final version of all the figures should be no more than 600 dpi.

Table. Vertical lines are not permitted. Folded tables are not accepted.

5. Supplementary Online Materials (SOM)

Supplementary Online Material should be submitted at the same time as the manuscript. Authors are welcome to submit animations, movie files or any additional information for online publication (the original file will be hosted on the server of J-STAGE DATA, a link will be provided in the SOM document). Please supply descriptions, captions, and references for all supplementary materials.

6. Galley proofs

Each contribution must have a responsible author. Galley proofs will be sent to responsible authors about one month before the expected publication date and should be returned to the editors within three days of receipt. In principle, the responsible author can correct only printing errors. The manuscript will not be sent to the authors at the time of first galley proof, so authors should keep a complete copy of their paper. Minor changes submitted by the responsible authors will be permitted while a paper is in galleys, but a charge will be made for substantial alterations.

7. Offprint

High quality pdf files but no offprint is available in this journal.

8. Charges

If a paper exceeds 24 printed pages (each single page contains up to 900 words), payment of page charges for the extra pages is a prerequisite for acceptance (9,000 JPY / 1 page).

9. Graphical Abstract

The author(s) should provide a Graphical Abstract (GA), a visual summary of the main findings of the paper, after acceptance of the manuscript. The GA should be 1280 x 720 pixels (w x h), in the format of jpg, gif, png. Times, Arial, or Symbol fonts are recommended. It should be large enough to be readable when reduced to a height of 200 pixels. All text or labels must be part of the image file.

10. Copyright policy

Paleontological Research applies the Creative Commons Attribution 4.0 International (CC BY) license (<https://creativecommons.org/licenses/by/4.0/deed.en>) to the articles that have published since August 2024 (vol. 29). CC BY allows anyone to use the work for any purpose as long as the original author of the work is credited. Copyrights of all the contents of Paleontological Research published before that time belong to the Palaeontological Society of Japan, for which permission is required from the Society for reproduction, posting, transmission or other distribution or use of the final contribution in the Journal in whole or in part in any medium other than for personal or internal use. For use of the contribution, even for authors, please contact the Society.
